Hi Mark. By October 17 can you please prepare an internal fact sheet for me that summarizes the pfoa blood levels in hoosick and then petersburgh. A few sentences in the nhanes data and then what was found in Hoosick and petersburgh. Use publicly available info on the nydoh website I think nhanes may have been recently updated. Re hoosick , doh first said the residents who were tested were about 12x the national average. They then removed the blood results from people who were drinking clean water (not on the public supply or impacted private wells) and revised it to 50x. I need the exact numbers. Short. Plain English. Thanks
